

US Greens produces the world's finest organic alfalfa, wheat grass, oat grass, and barley grass.

Kansas-based, family-owned and operated – US Greens are grown on our Kansas farmland. Our family has been in the alfalfa and cereal grass business for three generations and over 70 years. We plant, grow, harvest, dehydrate, pellet, freeze, and mill the greens, maintaining meticulous control throughout the process.

### Whole Leaf Powders

US Greens milled powders include the whole leaf from each plant. Only water is extracted. We don't presume to know more than Mother Nature, so we give you the whole food – not just selected parts.

**Certified Organic** , **Gluten-Free** , and **Kosher** 

Our operations from the fields to the dehydration facility to the milling center have met or exceeded the highest standards for certification as organic, gluten-free, and kosher.

### Vegan and Raw

We harvest alfalfa, barley grass, oat grass, and wheat grass at their peak to ensure a nutrient-dense profile. Our low-temperature dehydration and milling processes and frozen food storage ensure that our vegan products are both incredibly fresh and raw.

### Food Safety

Direct-cut harvesting and quick-pass dehydration methods ensure the lowest plate, yeast, and mold counts possible. We utilize on-site and third-party testing to ensure that our greens meet stringent quality/safety standards. All products are moved quickly to frozen food storage to preserve freshness until final shipment.

### No GMOs

No GMO plants are grown on our farms.

### State of the Art Milling Center

US Greens powders are milled in our brand new, state-of-the-art facility that mills our pelleted products to the finest powder available. Grinding is accomplished without appreciably raising the temperature of the product, thereby preserving the valuable nutrients and deep green color.

**From our fields to  
your dock, we deliver  
the best greens for you  
and your customers.**

We control and manage all of the steps of production — from planting the seeds to milling the final products. This allows us to ensure that our greens meet the highest quality standards. We preserve nutritional qualities by dehydrating and pelleting the greens within hours of harvest. The pellets are then loaded into 1,000 kilo sealed bags and filled with nitrogen. They are then moved quickly to frozen food storage to preserve freshness until ready for milling and final shipment.

### **Powders**

Our milled powders pass 100% through 80 mesh screens (particle size of 183 microns or less) to ensure unparalleled consistency of the ground product. Finer and coarser grinds are available. Contact us to discuss your needs.

### **Tablets/Capsules**

Ask us about milling requirements and excipients necessary for tableting and encapsulation. We are happy to work with you to meet all of your manufacturing needs.

### **Packaging Options Available**

Our greens are available in 1,000 kg supersacks as well as 25 kg boxes. All are completely sealed to preserve freshness. Our standard pack size is 25 kg.

### **Shipping**

Our facility is strategically located with ready access to major arterial highways, to make shipping fast and easy. Our experienced staff works with orders of all sizes, both domestic and international. Unless special arrangements are made, all orders are FOB (or Ex Works), Bonner Springs, Kansas. Contact us regarding documentation necessary for international orders.
